

DIGITAL DRIVER'S LOG

With Digital Driver's Log, the vehicle creates the driver's log fully automated. The driver is able to choose from three different trip modes within the connect business app (private, business and commute = trip to work) allowing him to manage his privacy settings. The trip purpose can be changed up to seven days afterwards. At the touch of a button, the driver's log can be exported.

Start Address	End Address	Start Time	End Time	Vehicle	Driver	Purpose

AUTOMATIC COLLECTION OF DATA.

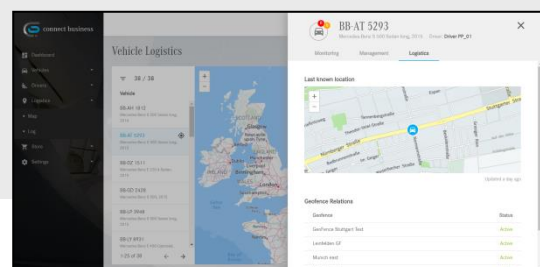

The digital logbook records all trips of a vehicle and transfers them into a detailed list view in the connect business portal.

To get all trip information, each business trip can be shown in a more detailed view. Amongst other things, you can choose a map illustration which shows the start and end of the trip.

Subscribing to the Digital Driver's Log activates all service functions in the connect business portal and the driver's app. Consequently, the service "Digital Driver's Log" covers both the commercial driver's log for the administrative part and the personal, vehicle centered logbook of the driver.

YOUR BENEFITS

- Automatic generation and collection of trips.
- High data quality by full automation.
- Simplified accounting for travelling expenses and tax return.
- Optimization of allocation and usage.
- Transparency with regard to usability.
- Tax benefits due to usage of the driver's log method as proof for tax authorities.
