

DRIVER MESSAGING

Keep in touch with your drivers and quickly inform them about upcoming maintenance appointments, changes to appointments or other events.

CONNECT QUICKLY.
COMMUNICATE SAFELY.

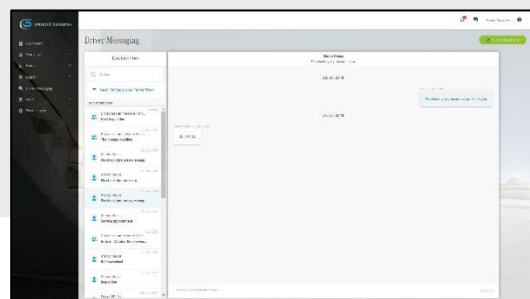

Share important information directly with your drivers using Driver Messaging. Sending messages to individual drivers or specific groups.

After booking the service, the fleet manager can send a message to a specific driver or to a previously created driver group. Based on intelligent search functions and the definition of driver and vehicle groups, recipients can be selected quickly and easily. The driver receives the message via the message function in the connect business app.

Unread messages are displayed in the connect business portal by means of a notification symbol. Thus, all relevant fleet data can be bundled in the connect business portal and the fleet can be controlled directly from the portal.

YOUR ADVANTAGES

- Fleet management and related communication on one platform – everything is bundled in the portal.
- Drivers can be contacted quickly: Sending messages made easy.
- Direct and easy exchange of information with drivers.
- Protection of the driver's privacy:
Driver responses in group chats are only visible to the fleet manager.
