

# VEHICLE LOGISTICS

With Vehicle Logistics you are always in the know about the current location of the vehicles in your fleet. This real time overview combined with an automatic area monitoring allows you a significantly more efficient order management through active vehicle tracking.

## VEHICLE LOCATIONS AT A GLANCE.

Vehicle Logistics visualizes the current location of your vehicles in business mode on a structured map.

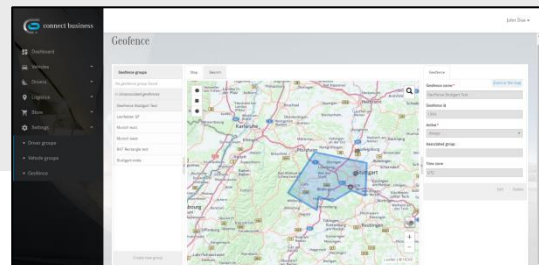

Vehicle Logistics displays the location of your vehicles either in a list view or on a map: As an overview for the whole fleet, particular driver and vehicle groups or referring to an individual vehicle.

By placing geofences you can easily track when vehicles of your fleet enter or exit a certain area. You can define areas as circles, rectangles or free polygons and even import them prospectively. If the boundary of a geofence is crossed, you will be notified by the portal immediately and can take action accordingly.

## YOUR BENEFITS

- Always up to date regarding the location of you vehicles.
- Additional efficiency profits in order management.
- Reduction of theft and misuse.
- Depiction of insurance policies.
- Configurable notification concept\* .

\* Optional, by subscribing to the service Fleet Messaging. Without the mentioned service only notification in the Geofence Log of the connect business portal is included.
