

Data Management Module (CCU)

One stop for product management and catalogue maintenance, with outstanding functionality

What's New In this Edition

Here at TecAlliance we always appreciate your feedback and constructive criticism. Along with general improvements in features and bug fixes we picked the best suggestions and incorporated them in the CCU software for all our customers. The main changes from last 2 months include:

Contents

PM solver health gauge.....	2
Article Attributes QuickView	2
Enabling the SV Menu for the CCU User Module.....	3
Expansion of Country Restrictions	4
Expansion of the levels on the mainscreen for Applications	4
Specify Articlenumbers for the Complete OE/Cross data Export.....	5
Changelog.....	7

PM solver health gauge

The „PM solver health“ is a new feature for the PM Solver to visualize the current health status of the PM Solver.

The „PM solver health“ shows the current status of the PM Solver. It will tell you if there are some things missing, for example the „missing attributes definitions“ as shown in the screenshot below:

This feature is useful to check if your PM Solver is up-to-date.

Article Attributes QuickView

There is now also a QuickView for the Article Attributes. With this functionality you will get a more clear overview of the Article Attributes in the application screen:

You can enable this functionality by checking the checkbox „Enable Article Attributes QuickView“ at the „UPDATE CONFIGURATION“ screen in the „Internal tables > Configuration menu“ in the CCU Supervisor Module

Enabling the SV Menu for the CCU User Module

It's now possible to use the CCU Supervisor Module functionality in the CCU User Module. This can be useful if you want a user to have a Supervisor functionality without having access to the Supervisor module.

See below a short instruction and example:

UPDATE CONFIGURATION

Options Colors Crossattributes Supplier attributes Pricing Translations Password Options Status Mail

Show message when missing Required Field

Show Remark when Required fields

Prevent entering Double Cross / DE records

Expansion of Country Restrictions

The fields for the Country codes have been expanded from 20 to 30 fields. This will make it possible to add more countries to a Country Inclusion / Exclusion. See the screenshot below:

Expansion of the levels on the mainscreen for Applications

The mainscreen for Application shows an overview of linked articles. The mainscreen showed 15 levels of articlegroups. The shown articlegroup levels have been expanded from 15 levels to 20 levels. With this update, the mainscreen will give more information, as shown in the example below:

Specify Articlenumbers for the Complete OE/Cross data Export

For the „Complete OE/Cross data Export“ it’s now possible to specify individual articlenumbers. This means it will not make an export for all articles, but for the articlenumbers you specified. For this feature a button has been added in the „Complete OE/Cross data Export“ screen. See the screenshow below:

The screenshot shows the 'Export Complete OE or Cross' dialog box. The 'Articlegroup(s):' field is empty. Below it, the 'Specify Articlenumbers' button is highlighted with a red box, and the text 'Loaded: 0' is also highlighted. The 'OE / Cross:' section has 'Cross' selected. The 'Layout:' section has 'Vertically' selected. The 'OE/Crossnumbers:' section has 'compressed' checked. The 'Include:' section has 'Cross Attributes' unchecked. The 'Export to file:' field contains the path 'C:\Users\MICHAET~1.RUP\AppData\Local\Temp\CrossOEList.XLSX'. The 'Cancel' and 'OK' buttons are at the bottom right.

If you press the button „Specify Articlenumbers“, you will see the following screen where you can fill in (or copy/paste) the articlenumbers:

The screenshot shows the 'Specify Articlenumber(s)' dialog box. The title bar reads 'Specify Articlenumber(s)'. The main area contains a text area labeled 'Enter or Paste articlenumber(s):'. Below the text area is a checkbox labeled 'Articlenumber contains spaces (don't remove spaces)'. At the bottom, there are 'Cancel' and 'OK' buttons. The 'OK' button is highlighted with a blue border. The background shows the 'Export Complete OE or Cross' dialog box with the 'Specify Articlenumbers' button highlighted.

URL drawing in 231.DAT + 232.DAT export

First introduced in the TAF 2.4 format it is now possible to export URL's in the 231.DAT + 232.DAT export. To activate this function navigate to Internal tables > Article Groups (ARG) in the CCU Supervisor Module. In the Drawing sheet please check „url drawings links active“.

Change Articlegroup

Articlegroup: FPAD

General Options AutoGenerate Articlenumbers **Drawing** Cross Popup TecDoc PartsList AccessoryList MAM
