

Order Web (TecWeb 5.0) Newsletter History

Release 1

Newsletter

The Newsletter informs about the new features that are implemented in regular cycles in OrderWeb and are now available.

Individual organization colour

For each organization an individual organization colour can be selected by the administrator under organization details.

Global icons

Globally understandable icons for user, password and language are implemented on the login page.

New manual and quickstart guide

Under help or “?”, the new OrderWeb manual as well as features list with quickstart guide are available.

TecCom ID of organization

The currently active TecCom ID of the organization is displayed in the user profile (important for support cases).

Automatic selection of current organization

The last selected organization is selected automatically again at the next log in.

Release 2

Public shopping carts and favorites

Shopping carts and favorites can be saved as “public”. Thereby all users of this organization are able to work with this shopping cart and favorite.

Download reverse messages

The selection of the reverse messages download is also possible with the second step of the registration.

Un/read messages in the received journal

Messages in the received journal can be marked as read or unread.

Release 3

Cloud integration

With a connected cloud you are able to download journal entries automatically and store them without time limit, as well as upload IFD data files for an automatic order process. Also, a log journal was added for displaying possible error cases.

Outbound journal: status request

With the status request, you can actively request information about the order you made and check if an order has been received by the supplier.

Implementation of Collaborative Managed Data (TecCMD)

If a supplier supports Collaborative Managed Data (TecCMD), the detailed information of an article can be displayed.

IFD template files

IFD sample and order files are provided as templates in the IFD settings.

Bulk import of users

Users can be imported by uploading a list.

Entering TecCom ID has been simplified

TecCom ID can be copy-pasted in one field during the registration process.

Feedback function

Give us your feedback (Information/Feedback).

Release 4

Move articles to another shopping cart

Moving articles from a saved shopping cart to another shopping cart was added as function.

Product number auto completion

While typing the product number or name you see all corresponding products to facilitate entering the correct product number, if the supplier supports Collaborative Managed Data (TecCMD).

OrderWeb available in 17 languages

Czech, Portuguese and Swedish are now additionally available in OrderWeb.

Release 5

Implementation of the Membership Profile for suppliers (first step of expansion)

Suppliers are able to set up general settings (maker codes, currencies, UoM, etc.) and upload of their own company logo, to be displayed in the shopping cart.

Request & Order process improved

After a request or order was sent, it is possible to continue working in OrderWeb and e.g. carry out several requests or orders simultaneously. A notification system was implemented to inform about the status of the shopping carts and getting redirected to the corresponding shopping cart.

Import articles via URL from online catalogues

Suppliers can connect their online catalogues by using the OrderWeb interface. Articles can be selected in the catalogue and copied to OrderWeb, if the catalogue is adapted to the interface. The TecAlliance support offers more information regarding this feature.

e-Invoices Journal

Legally valid electronic invoices sent via the e-Invoicing (TecInvoice) service can be received in the new e-Invoices Journal: View e-invoices lists, details and documents, download invoice documents.

Release 6

Further improvements of features from Release 5

It is possible to clear all notifications in the notification system. Also an information message is shown, that the shopping cart is being processed, when sending out a request or order. The membership profile is continually being further developed.

Newsletter history

The newsletter history was added to manuals under Information/Help.

Release 7

Implementation of the Membership Profile for suppliers

First step of expansion

Suppliers are able to set up the general settings with UoMs, currencies, material handling and maker codes as well as upload of their own company logo, to be displayed in the shopping cart.

Second step of expansion

Suppliers are able to set up the express order settings with common options, dispatch modes, required and supported fields.

More detailed information regarding each feature is available in the manual.

Release 8

Implementation of the Membership Profile for suppliers

First step of expansion

Suppliers are able to set up the general settings with UoMs, currencies, material handling and maker codes as well as upload of their own company logo, to be displayed in the shopping cart.

Second step of expansion

Suppliers are able to set up the express order settings with common options, dispatch modes, required and supported fields.

Third step of expansion

Suppliers are able to set up the inquiry and stock order settings and also add informative texts.

The Membership Profile is fully implemented now.
