

Accounting automation and spend analysis

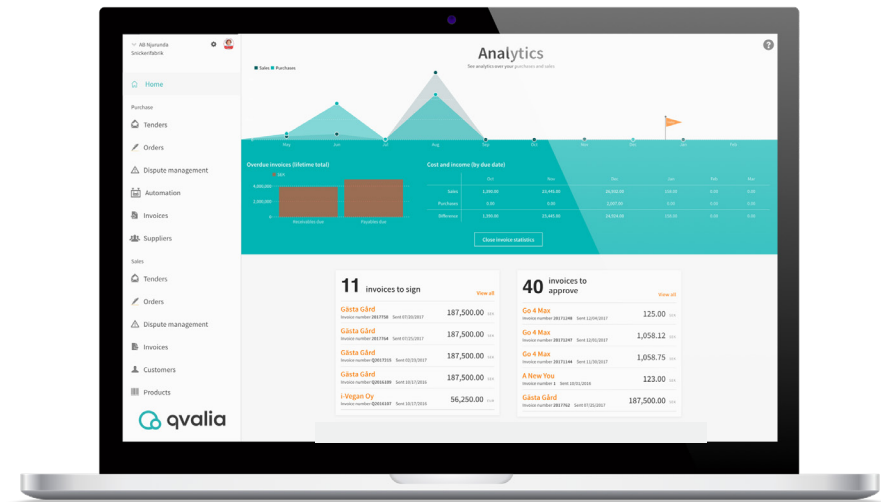

How to transform procurement, automate accounting – and realise your most important asset

In a digital world, data is probably your most important asset. No matter what business you're in. Time to capitalise this potential. Find out how Qvalia digitises your transactional data and enables accounting automation and data-driven decision-making in procurement. All within your existing ERP and accounting software.

What better reflects your business than your transactions? In many ways, your business is your transactions.

Qvalia's transaction automation platform puts you in control. By accessing, integrating, and visualising purchase invoice data, you'll realise the potential of full accounting automation and gain complete insight into organisational spend. In real-time.

The secret? A new approach to transactional data - and a pinch of crowdsourcing.

Solutions

ACCOUNTING AUTOMATION

Crowdsourced automation

Invoice management and accounting is a struggle. For the accounts payable team. For purchasers in your organisation. And for you. Don't let tedious and repetitive coding, and ever-increasing accounting complexity, waste more of your time.

Qvalia enables full accounting automation with crowdsourcing technology. Invoice items are categorised instantly, thanks to our community of users, in accordance to United Nation's standardised products and services database (UNSPSC). If Qvalia hasn't yet categorised a particular item, do it once and never again. Create accounting rules to easily allocate items to your accounts automatically. No coding needed.

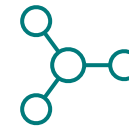

SPEND ANALYTICS

Data-driven procurement decisions

Traditional spend analysis software is much like reinventing the wheel. With full control of your invoice data, information about your spend wouldn't need to be recreated in expensive stand-alone applications. Discover the benefit of fully informed data-driven procurement decisions.

Qvalia provides spend analysis and risk profiling in real-time. Get complete insight into items, volumes, amounts, and suppliers. Enable true data-driven decision-making and manage risks such as credit-rating and insolvency among your current suppliers. Beautifully visualised, intuitively user-friendly.

ERP INTEGRATION

Don't disrupt your infrastructure

Changing accounting or enterprise resource planning software is one of the most dreaded endeavours an organisation can pursue. The in time and money are significant. Don't disrupt your infrastructure, make it smarter.

Qvalia integrates your transactional data seamlessly and securely with your ERP through our flexible APIs or SFTP.

How it works

Sign up and get going within minutes using Qvalia's cloud-based software platform. Minimal ERP integration needed.

Start routing invoices through Qvalia. You decide the volume.

Qvalia digitises and categorises line items on every invoice. When not recognised automatically, categorise it yourself once and you'll never have to do it again.

Set up accounting automation rules with just a few clicks. Apply code, project or cost center once and you'll never have to do it again.

Experience spend analysis in real-time. Effortless insights into your organisation's purchases, suppliers and risk profiles.

RESULT

- Increased organisational productivity as your organisation can spend time on things that matter.
- Reduced costs with Qvalia's competitive and transparent pricing model.
- Access to next generation automation and spend analytics capabilities.
