

Smart basis for indoor parking

Silikal floors for garages

Expect more from your floor.

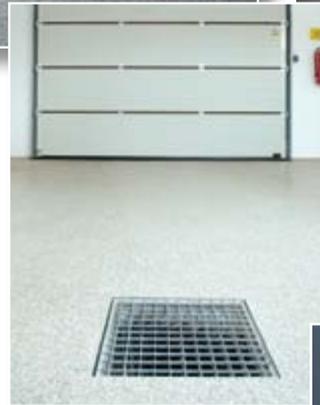

Garages are used for all kinds of parking...

... from cars, motorbikes and bikes to rubbish bins and lawnmowers. That's why a floor coating from Silikal makes good sense. It can withstand high loads, is easy to clean and looks great.

Reactive resin floors are resistant to petrol and oil spillages and even to battery acid. Water is not a problem for these floors, even if puddles are not cleared up for some time or if they are exposed to de-icing salt in winter.

Interspersed "chips" or sand in a variety of colours ensure that the storage space is visually appealing. Light soiling is barely visible. Heavier soiling can be cleaned away using a high-pressure cleaner if necessary. Furthermore the colour of the garage floor can be perfectly matched to the area in front.

Skillfully applied by qualified installers and the new floor is fully cured and ready for action within one hour. A perfect way to keep your operation running wide open.
