Silikal Reactive Resin Flooring for  
**PRODUCTION AND OFFICE AREAS**

Expect more from your floor.

## Precision shapes and courageous colours

... steel chips and grinding agents can't bend a Silikal floor out of shape!

Shapes and colours go great together, and you can see the living proof of this at a manufacturer of metal moulds for shaping plastic products and accessories. The planner of this building placed special emphasis on good design from the ground up. In the production area, the offices and the entryway, the floors were made bright and colourful with a lively yellow coating of Silikal reactive resins. This sunny yellow colour was chosen to offer a contrast to the company colours turquoise and blue which can be found on the outside and in the entrance hall. The colour also stands out beautifully against the blue doors, window frames and beams, and gives the whole building a feeling of warmth and vitality.

There were not only good optical but also good acoustic reasons for this new floor.

In the company's 500 m<sup>2</sup> production hall, where workers spend the entire day on their feet and a number of machines are running, the highly durable Silikal coating provides a cushion against noise. But that's not all: the softer surface also offers a cushion for tired feet and legs, not to mention the anti-skid properties for extra safety against slipping.
