Water Digitalization – Using Monitoring, Automation and Optimization to Improve Water Management

UNIQUE SELLING POINTS

- Real-time monitoring and remote control
- Algorithm-based leak detection instead of fixed predefined thresholds
- Comprehensive water infrastructure management, including water resource optimization
- A modular platform adaptable to customer requirements
- Providing actionable insights, not just data
- Complete service covering the entire process – from analysis and technical design to implementation, maintenance, and ongoing operation support

VISION

In 2026, nextdrop aims to deliver planned projects, meet the needs of its key partners, and stabilize company operations. In 2027, the company plans to expand cooperation across the Czech Republic, followed by gradual business scaling and supply chain stabilization from 2028 onwards.
