

RoadTwin s.r.o.

Developer of Web Applications for Urban Traffic Modeling

UNIQUE SELLING POINTS

Intuitive web applications that can be used directly by city and regional staff without the need for complex expert tools

Fast evaluation of the impact of road closures, traffic organization changes, new road infrastructure, and other transportation measures

A unique combination of traffic modeling, data analytics, and extensive hands-on experience from real-world urban transport operations

An affordable and accessible approach to traffic modeling for small and medium-sized cities

VISION

The company's vision is to empower cities and regions to become true coordinators of their own transportation systems, enabling them to independently assess the impact of planned changes. RoadTwin aims to expand its solution to dozens of cities across the Czech Republic and internationally while making traffic modeling accessible to small and medium-sized municipalities that currently cannot afford traditional solutions. The company also plans to further develop the automation of traffic model creation and updates, enhance the use of real-time data, and improve simulation speed. In the long term, Pilsen will serve as a showcase of successful implementation and a source of best practises for other cities.
