

Tachovské SPV s.r.o.

Manufacturing with Compostable Biomaterials

UNIQUE SELLING POINTS

A functional alternative to conventional thermoplastics with comparable physical and mechanical properties
Fully aligned with European legislation restricting the use of plastic products
Made from natural, biodegradable, and compostable materials
Manufactured with a significantly lower carbon footprint
Environmentally sustainable through the use of renewable raw materials
Tailored to specific customer requirements and applications

VISION

To replace single-use products made from conventional thermoplastics with biodegradable and compostable bioplastics. The company also aims to establish a completely new, high-value industrial sector in the Pilsen Region focused on the production of bioplastics.
