

A circle is an infinite set of points and it revolutionized our civilization. Another groundbreaking infinite set of points is the 3+ system. Each of them is a starting point to create a new object, or to give it a new function. With simple system of connectors and versatile elements you can transform plates (, ) into tables (, ), tables into workshops and workshops into display systems and a lot more. It becomes an ultra-light construction for the everyday use, thanks to its strong, innovative and minimalistic features that everyone is free to create. Our 3+ collection of seatings () tables (, ) and shelving systems () is not particularly designed for work or home interiors and the end-user himself is making a final decision about its application.

Technology.

We are process designers

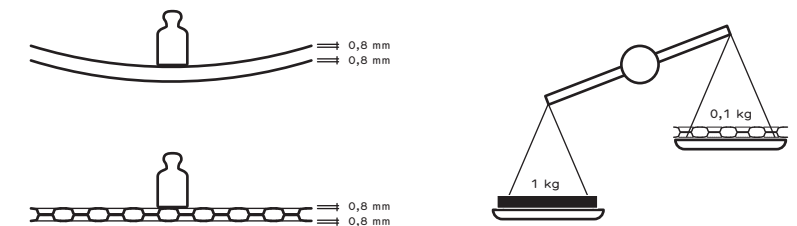

Our goal has always been to seek innovative methods of stabilization of thin metal sheets in order to create a construction element for modern industry, architecture and design. Our FiDU technology has already provided a broad range of solutions, now it is time for 3+.

Deformation is a crucial element of both technologies, with 3+ relying on punctures. Two sheets of metal covered with a raster of points are joined to create a stable construction element. The 3+ technology allows creation of raster points on boards of any shape, which makes it the most innovative creation process for multi-layered sandwich boards. Now, major construction changes do not require major production changes any more. This allows us to create products with limitless possibilities of use.

Standard metal sheets and 3+ plates

Same thickness,
different stiffness

3+ plates are lighter

Two thin metal sheets used to create a 3+ plate are unstable and behave like a sheet of paper. Only the 3+ grid of stabilization points grants the construction properties.

A standard multi-layer plate is heavy and requires a complex and multi-stage production process. Thanks to the intuitive 3+ technology, we create panels using not only sheet metal, but also the world's lightest natural resource - air.

A sustainable production process saves raw materials and reduces costs. The 3+ technology uses sheet metal, a generally available material, and generates minimal amounts of waste products, which are easily processed and ready for reuse.

Two sheets of metal covered with a raster of points are joined to create a stable construction plate. The 3+ technology allows creation of raster points on plates of any shape, which makes it the most innovative creative process for multi-layered sandwich boards.

Story.

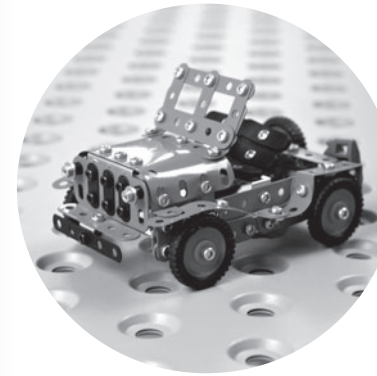

Playful bricks

Each of us in childhood was a little engineer who used bricks to create the world limited only by imagination. The aim of 3+ is to restore the pure fun but in this case on a larger scale that allows us to create a world in which we live, work, rest and play.

3+ is like Lego which out of the box triggers the incredible amounts of creativity and like the bricks from the Danish toy manufacturer 3+ give you opportunities for unlimited creation. The connectors system is as simple as this in Meccano toys that turn steel modules into timeless objects. Inspiration from the world of toys reflect one of our rules that says that design is fun and simple.

3+ is the name of the technology and furniture collection system, which is one of the 3+ technology manifestations. As process designers we not only aspire to design fabulous forms. Our aim is to create innovative solutions which generate endless possibilities for development and usage. Through out design process we want to reach the best possible synergy between technology and design.

Playful bricks

Start your unrestricted imagination. Build your world with blocks on a scale of 1:1. Create a space that will be exactly as you want, that doesn't limit your creativity. 3+ gives you endless and timeless possibilities.

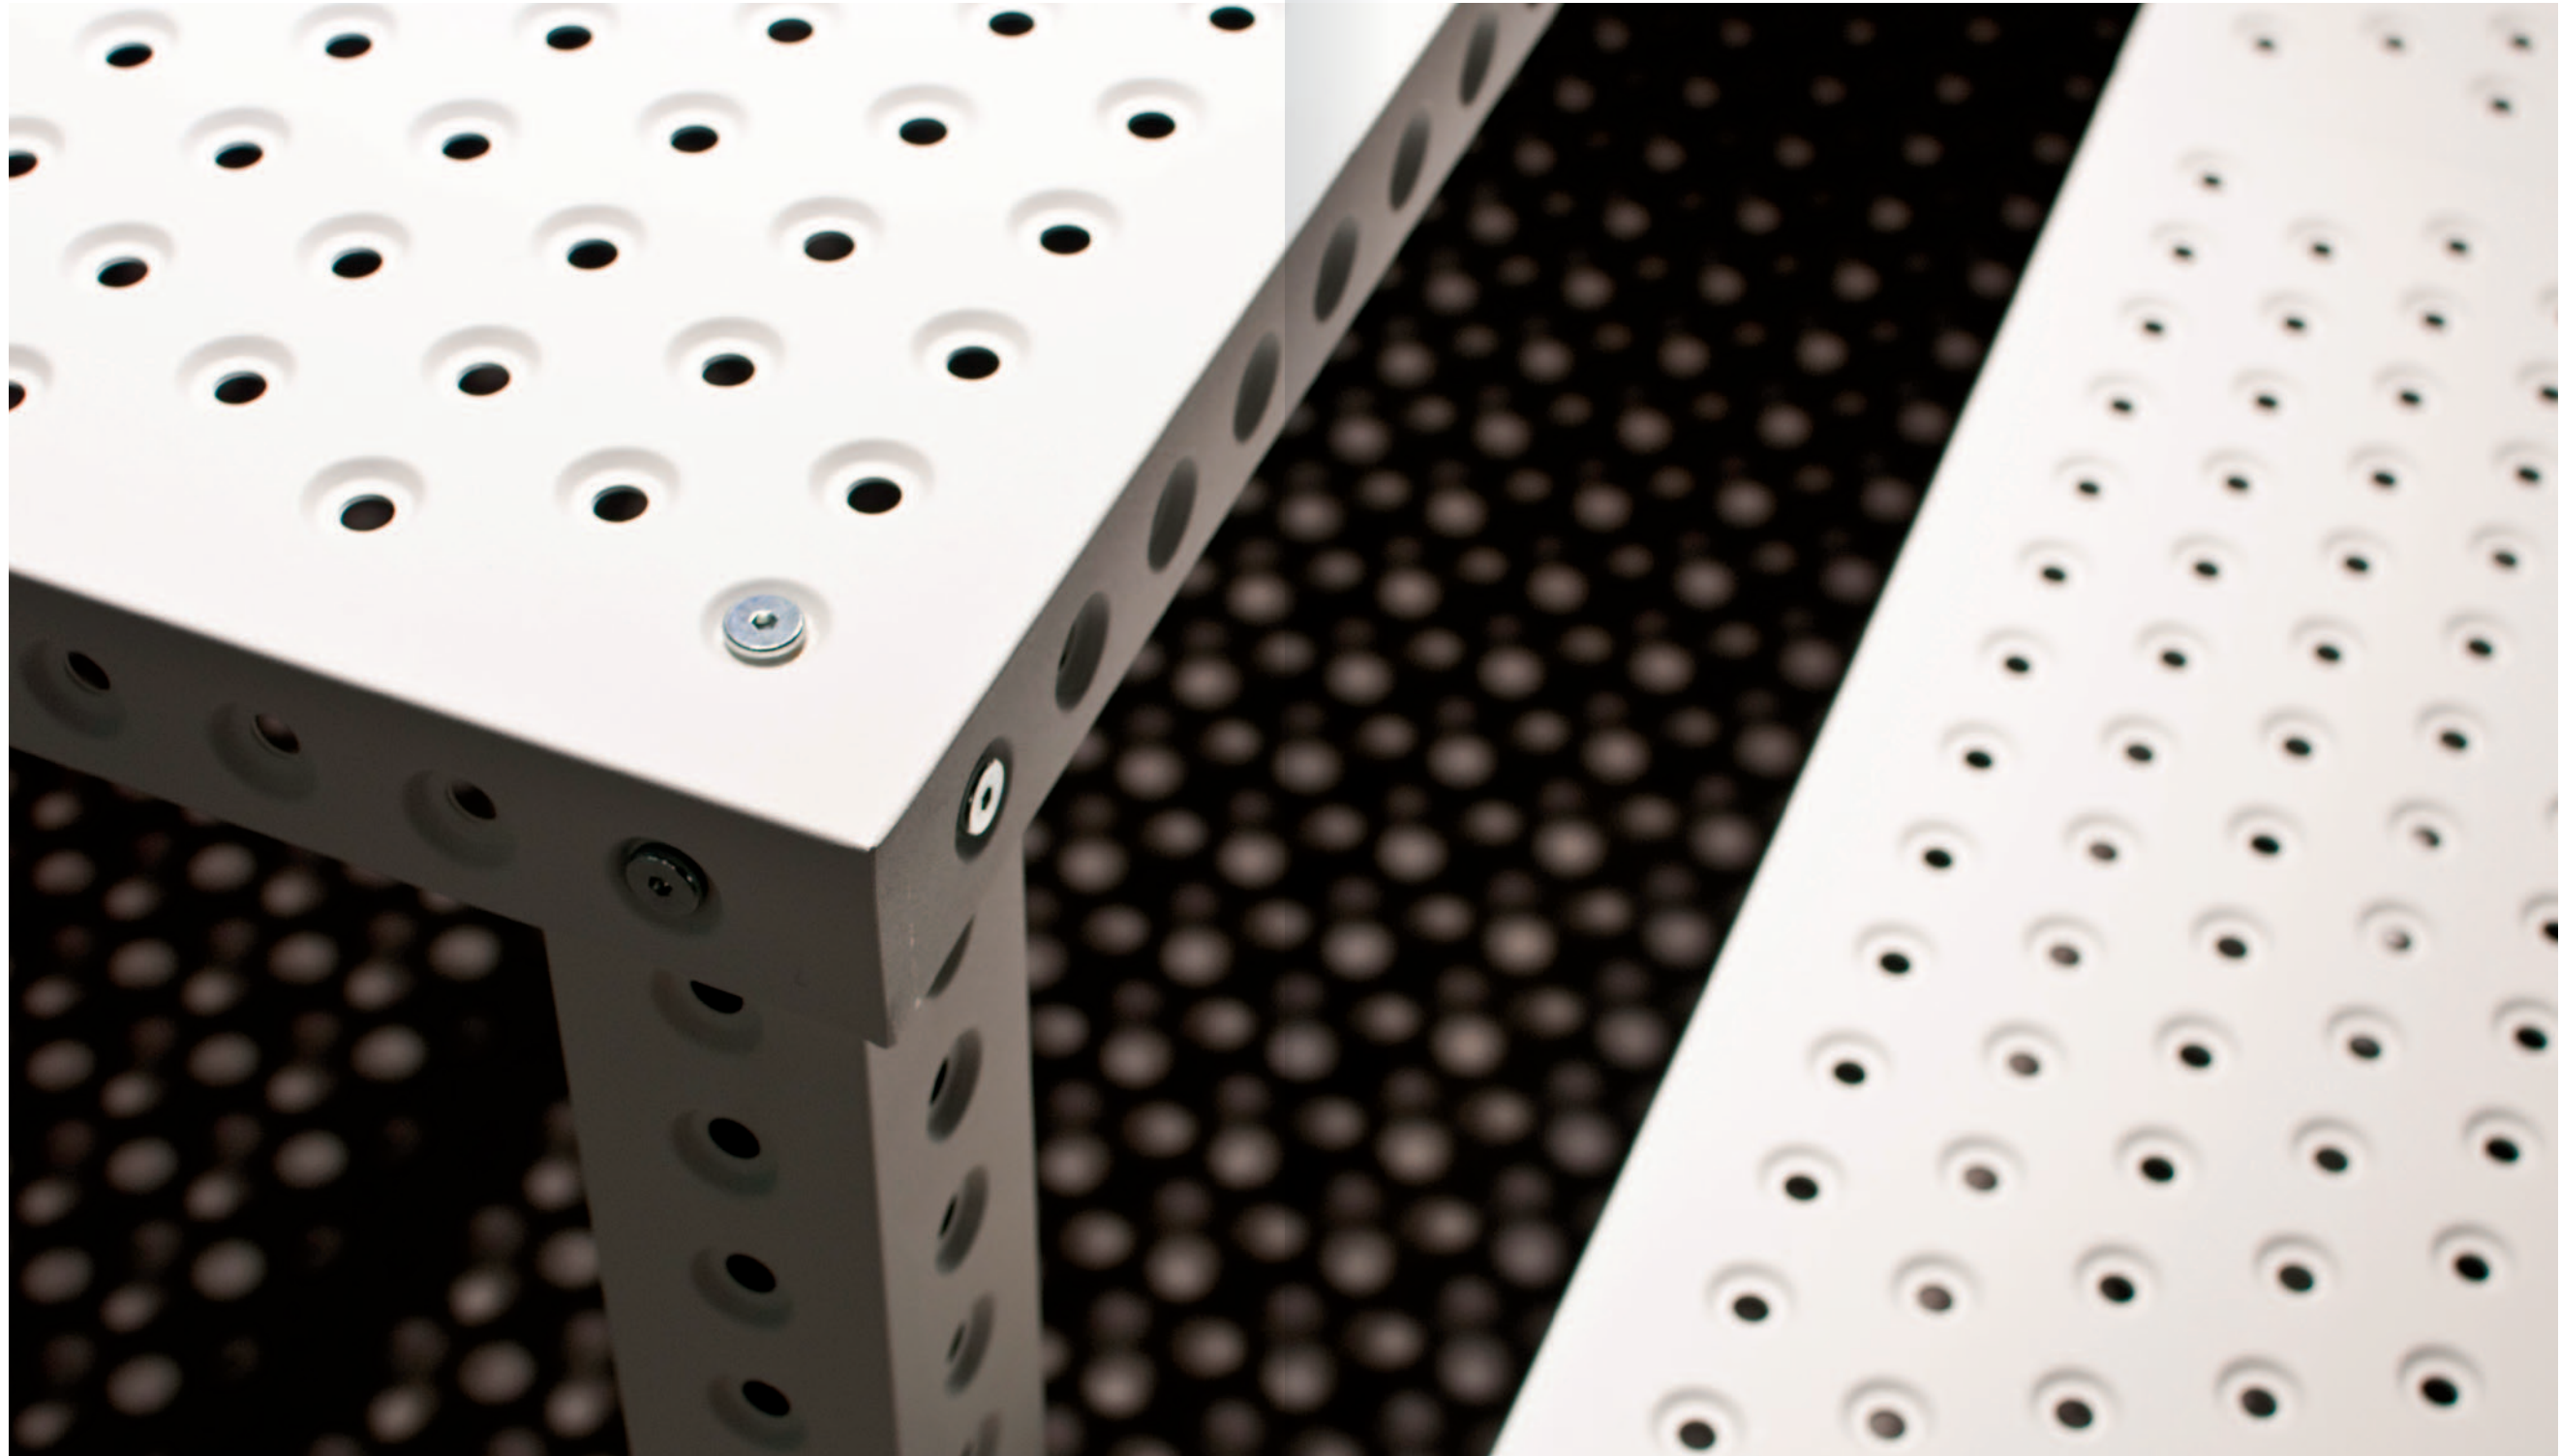

Turn your workplace in the research center on 3+ application possibilities. Have fun with freely changing the space around you and crossing its existing borders. Become our partner in the development of one of the most innovative technologies 3+.

3+ system is totally radical and industrial fitting into any space but not dominating it. A place can get old but not the 3+ furniture with its adaptability to changing world around us.

3+ form interacts with the space around in many ways. The shadow cast by objects manufactured in 3+ technology adds a new, intriguing dimension to the space. However, without a shadow of a doubt a universal system of connectors provides a quick and simple installation of any modules.

Home. Domesticated technology

Domesticated
technology

The need to possess the 3+ furniture is not defined by space, but by their functionality. 3+ suits the living room as well as the dining room or the child's room. As a child moves swiftly around your house, so does the 3+.

Home & office

Office & shop

Shop & workshop

The space around us is an infinite number of points and possibilities to combine them. Using a grid of points, we have stabilized steel sheets, making them a part of our dynamic everyday life.

Each 3+ perforation is a starting point to satisfy personal needs and accommodating products to new situations and tasks.

The versatility of our solution allows you to arrange your workshop using e.g. furniture boards from your living room or your dining table. No matter what you do 3+ allows you to arrange any space as easily as putting Lego bricks together.

Facades.

A total & radical system

Our total system allows you to create space in all of its dimensions, intertwining interior and exterior design. 3+ is an utterly architectural system.

Applications.

Make it more unique

3+ is like a mobile operating system, creating an environment ready for new applications to be installed or created. We take care of every detail in our collection.

We offer a lot of applications that are another bricks in the system that allow you to adapt 3+ modules for your particular needs. 3+ has been designed in line with the concept of Open Design which involves openness to new applications, projects and use by creative people with new and interesting ideas.

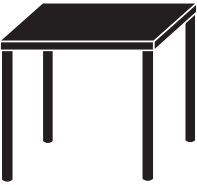

Applications allow you to discover and explore further possibilities of 3+ furniture and adapt them to your specific needs.

FiDU collection

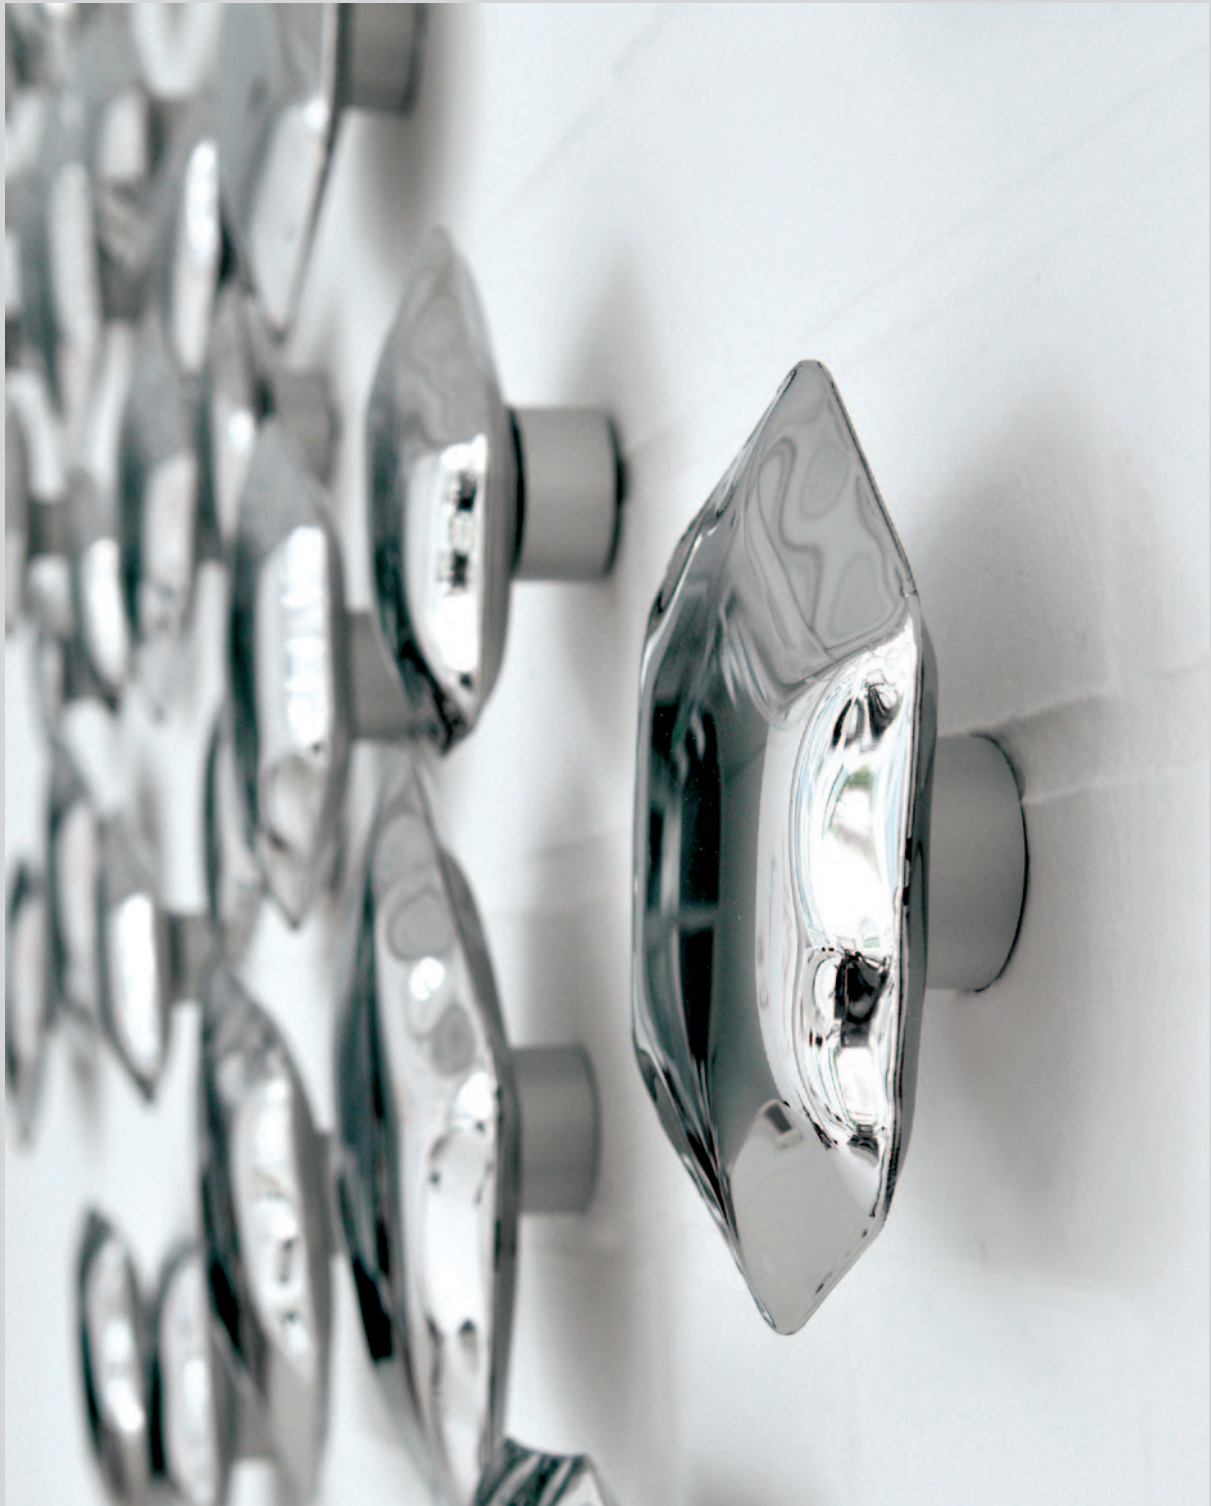

Overview

FiDU technology shows the true face of metal that becomes ultralight construction of our everyday life and the future. This way to create one-of-a-kind products.

FiDU collection. Ultralight

FiDU technology is the continuation of craftsmanship, in which the material and the craftsman leave their mark in the object they create, giving their individual touch.

FiDU collection Overview

We research and discover new possibilities, we play with forms and we deliver innovation and uniqueness to people who appreciate design and technology. FiDU brings out the true face of a metal by giving it a form and function of hangers, chairs, benches, mirrors, etc.
